DETAILED ACTION

Specification

1. The abstract of the disclosure is objected to because it contains legal phraseology such as "said" (see line 3). Correction is required. See MPEP § 608.01(b).

Claim Objections

2. Claim 7 is objected to because of the following informalities: Substitute "the modification" with -- a modification --. Appropriate correction is required.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in-

(1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effect under this subsection of a national application published under section 122(b) only if the international application designating the United States was published under Article 21(2)(a) of such treaty in the English language; or

(2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that a patent shall not be deemed filed in the United States for the purposes of this subsection based on the filing of an international application filed under the treaty defined in section 351(a).

4. Claims 1, 2, and 4-20 are rejected under 35 U.S.C. 102(e) as being anticipated by Zacharias (US 6,494,367).

Re claims 1, 2, 5, 6, 11-13, and 15: Zacharias teaches a secure multi-application card system comprising:

a terminal device configured to interface with a multi-application card 205, which serves as a token as recited in claim 1, to present card information to a user, and to receive an input designating a selected account from the user, wherein the terminal device includes a card reader 210 configured to read the card 205 and a display screen configured to display information associated with the card 205;

a database 230 storing account information for accounts at multiple financial institutions pertaining to the card 205, wherein the database is stored remotely and wherein the system further comprises a remotely located platform hosting the database and a communication system connecting the remotely located platform with the terminal device; and

a processor 220 configured to access the database, to send information to the terminal device and to receive information from the terminal device and the database 230, and to generate charges on the selected account, wherein the processor 220 is configured to communicate via an Internet (see col. 4, line 17 to col. 5, line 20; col. 5, lines 34-67; col. 7, line 51 to col. 8, line 54).

Re claims 4 and 14: Zacharias teaches wherein the card 205 is a credit card.

Re claims 7 and 16: Zacharias teaches wherein the system is configured to permit a modification of the account information remotely (see col. 6, lines 59-62; col. 7, lines 11-14).

Re claims 8 and 17: Zacharias teaches wherein the generation of charges is accomplished by providing selected account information to a retailer (see col. 5, line 48 to col. 6, line 7).

Re claims 9 and 18: Zacharias teaches wherein the accounts are related to credit card issuers (see col. 4, lines 10-11).

Re claims 10 and 19: Zacharias teaches wherein the accounts are related to banking institutions (see col. 4, lines 10-11).

Re claim 20: Zacharias further teaches a method for providing access to multiple credit accounts via a single credit card 205 comprising identifying at least two independent credit accounts that are to be accessible via a single credit card 205; storing information for each the at least two independent credit accounts in a database 230; designating a credit card for one of the at least two independent credit accounts as a multi-account credit card 205; and associating the stored information for each of the at least two independent accounts with the designated multi-account credit card 205, wherein a user may use the multi-account credit card 205 to complete financial transactions involving any of a selected one of the at least two independent credit accounts (see col. 4, line 17 to col. 5, line 20).

Claim Rejections - 35 USC § 103

5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the

Art Unit: 2876

invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

6. Claim 3 is rejected under 35 U.S.C. 103(a) as being unpatentable over Zacharias (US 6,949,367) in view of Cohen et al (US 6,464,135). The teachings of Zacharias have been discussed above.

Zacharias fails to teach or fairly suggest a terminal device having a touch screen display.

Cohen et al discloses an automated teller machine having a touch screen display (see figures 1-4; col. 3, lines 4-7). In view of Cohen et al's teaching, it would have been obvious to an artisan of ordinary skill in the art at the time the invention was made to employ the notoriously old and well known touch screen display to the teachings of Zacharias to provide a more moderate interactive terminal and to prolong the life expectancy of the system with less moving mechanical parts.

Conclusion

7. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Wynn (US 5,859,419) discloses a programmable multiple company credit card system; Lalonde (US 5,844,230) discloses an information card; Rose et al (US 5,770,843) discloses an access card for multiple accounts; Taylor (US 5,578,808) discloses a data card that can be used for transactions involving separate card issuers; Taylor (US 5,530,232) discloses a multi-application card; Dethloff et al (US 4,837,422) discloses a multi-user card system; and Kashkashian, Jr. (US 4,700,055) discloses a multiple credit card system.
